## Precision Medicine Call to Action: Deciphering the Genetic Code in Clinical Practice

August 23, 2015

**Tim Wiltshire, PhD**  
Director, Center for Pharmacogenomics and Individualized Therapy  
Associate Professor, UNC Eshelman School of Pharmacy

## Disclosure

- No conflicts of interest to report

CENTER FOR PHARMACOGENOMICS AND INDIVIDUALIZED THERAPY | UNC-CHAPEL HILL | CPIT.UNC.EDU

## Objectives

- Describe precision medicine and pharmacogenomics
- Evaluate the significance of pharmacogenomics on current and future clinical practice
- Apply pharmacogenomics guidelines and additional resources to clinical scenarios
- Describe how personal pharmacogenomics testing will likely affect the future of clinician education
- Discuss the need for patient advocacy in regards to precision medicine

CENTER FOR PHARMACOGENOMICS AND INDIVIDUALIZED THERAPY | UNC-CHAPEL HILL | CPIT.UNC.EDU

## What is Precision Medicine?

- Approach for disease treatment and prevention
- Individual variability in genes, environment, and lifestyle
- Significant advances in cancer
- Minor progress in other disease states

The White House PMI privacy and trust principles, July 2015  
[www.whitehouse.gov](http://www.whitehouse.gov)

## Current Model: Imprecision Medicine

The infographic displays 10 drugs and their associated conditions, with human icons representing treatment outcomes:

- 1. ABILIFY (aripiprazole)** - Schizophrenia: 3 blue icons, 2 red icons.
- 2. NEXIUM (esomeprazole)** - Heartburn: 1 blue icon, 18 red icons.
- 3. HUMIRA (adalimumab)** - Arthritis: 1 blue icon, 2 red icons.
- 4. CRESTOR (rosuvastatin)** - High cholesterol: 1 blue icon, 18 red icons.
- 5. Cymbalta (duloxetine)** - Depression: 1 blue icon, 18 red icons.
- 6. ADVAIR DISKUS (fluticasone propionate)** - Asthma: 1 blue icon, 18 red icons.
- 7. ENBREL (etanercept)** - Psoriasis: 1 blue icon, 2 red icons.
- 8. REMICADE (infliximab)** - Crohn's disease: 1 blue icon, 2 red icons.
- 9. COPAXONE (glatiramer acetate)** - Multiple sclerosis: 1 blue icon, 18 red icons.
- 10. NELLISTA (pegfilgrastim)** - Neutropenia: 1 blue icon, 18 red icons.

Blue = Treatment Success  
Red = Treatment Failure

Schork NJ. Nature 2015;520:609-611.

## What is Pharmacogenomics?

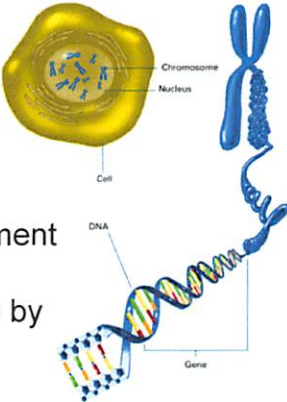

- Study of how genetic variations affect a patient's response to drugs
- Individualize therapy based on genetics
  - Identify responders and non-responders
  - Optimize dose
  - Prevent adverse drug reactions (ADRs)
- Our goal (RIGHT Protocol):
  - The **right** dose of
  - the **right** drug for
  - the **right** patient at
  - the **right** time

CENTER FOR PHARMACOGENOMICS AND INDIVIDUALIZED THERAPY | UNC-CHAPEL HILL | CPIT.UNC.EDU

## Variation in the Human Genome

- Our genome contains 3 billion base pairs of DNA
- Between 2 people, there are approximately 3 million base pair differences
- Understanding variation has shown promise for improving disease treatment and outcomes
- Variation can change drug response by affecting pharmacokinetics or pharmacodynamics

National Institute of General Medical Sciences

CENTER FOR PHARMACOGENOMICS AND INDIVIDUALIZED THERAPY | UNC-CHAPEL HILL | CPIT.UNC.EDU

## Variation in the Human Genome

- Single nucleotide polymorphism (SNP)
  - Most common cause of genetic variation
  - Example: *VKORC1* 1173 C>T
- Other polymorphisms:
  - Insertions
  - Deletions
  - Duplications

Polymorphism  
"Poly" Many  
"Morphe" Form

CENTER FOR PHARMACOGENOMICS AND INDIVIDUALIZED THERAPY | UNC-CHAPEL HILL | CPIT.UNC.EDU

## Variation in the Human Genome

- Different versions of a gene are called alleles
  - Example: *CYP2C19* \*1/\*2

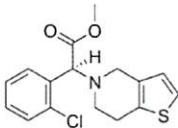

| Allele | Function  | Frequency of CYP2C19 Variants (%) |       |
|--------|-----------|-----------------------------------|-------|
|        |           | Caucasian/African American        | Asian |
| *1     | Wild-Type | -                                 | -     |
| *2     | Loss      | 10-15                             | 30-35 |
| *3     | Loss      | <1                                | 5-10  |
| *17    | Gain      | 16-22                             | 1-3   |

CENTER FOR PHARMACOGENOMICS AND INDIVIDUALIZED THERAPY | UNC-CHAPEL HILL | CPIT.UNC.EDU

## Predicting Efficacy

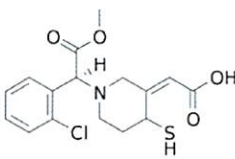

- Approximately 25% of patients on clopidogrel experience a sub-therapeutic response

**Clopidogrel (Prodrug)**

## Pharmacogenomics Knowledgebase (PharmGKB)

- <https://www.pharmgkb.org/index.jsp>
- Offers various levels of information
  - Variant annotations
  - Drug-centered pathway
  - Very important pharmacogenes
  - Clinical annotations
  - Pharmacogenomics-based drug-dosing guidelines
  - Drug labels with pharmacogenomic information

Pharmacogenomics Knowledge Implementation

Primary Pharmacogenomic Literature

Knowledge Extraction

Knowledge Annotation, Aggregation & Integration

Clinical Interpretation

Clinical Implementation

CENTER FOR PHARMACOGENOMICS AND INDIVIDUALIZED THERAPY | UNC-CHAPEL HILL | CPIT.UNC.EDU

## Clinical Pharmacogenetics Implementation Consortium (CPIC)

- Purpose is to translate genetic information into clinical actions
- Prioritizes measurable and interpretable information based on community input, including CPIC members, American Society for Clinical Pharmacology and Therapeutics members (ASCPT), and the Food and Drug Administration (FDA)
- Makes clear recommendations on clinically actionable pharmacogenomic variants

**Table 1** Example of assignment of likely \_\_\_\_ [gene] phenotypes based on genotypes

| Likely phenotype  | Genotype   | Examples of diplotypes (alleles, one from each parent) |
|---|--|--|
| Homozygous wild type or normal, high activity<br>(~__% of patients) | An individual carrying two or more functional (*1) alleles                                     | *1/*1  |
| Heterozygote or intermediate activity<br>(~__% of patients)         | An individual carrying one functional allele (*1) plus one non-functional allele (*2, *__, __) | *1/*2, *1/*3A, *1/*3B, *1/*3C, *1/*4                   |
| Homozygous variant or deficient activity<br>(~__% of patients)      | An individual carrying two non-functional alleles (*2, *3A, *__, __)                           | *3A/*3A, *2/*3A, *3C/*3A, *3C/*4, *3C/*2, *3A/*4       |
| Ultrarapid....  | Add rows as needed   |  |

Relling MV and Klein TE. Clinical Pharmacology and Experimental Therapeutics 2011;89:464-467.

**CPIC Guidelines**

<https://www.pharmgkb.org/view/dosing-guidelines.do?source=CPIC>

**Table 1: Recommended therapeutic use of abacavir based on HLA-B genotype**  
Adapted from Tables 1 and 2 of the 2012 guideline manuscript.

| Likely phenotype  | Genotypes  | Examples of diplotypes                  | Implications for phenotypic measures                      | Recommendations for abacavir therapy        | Classification of recommendation for abacavir therapy <sup>a</sup> |
|---|--|---|---|---|--|
| Very low risk of hypersensitivity (constitutes ~94% <sup>b</sup> of patients) | Absence of *57:01 alleles (reported as "negative" on a genotyping test)              | *X/*X <sup>c</sup>                      | Low or reduced risk of abacavir hypersensitivity          | Use abacavir per standard dosing guidelines | Strong   |
| High risk of hypersensitivity (~6% of patients)                               | Presence of at least one *57:01 allele (reported as "positive" on a genotyping test) | *57:01/*X <sup>c</sup><br>*57:01/*57:01 | Significantly increased risk of abacavir hypersensitivity | Abacavir is not recommended                 | Strong   |

<sup>a</sup> Rating scheme described in the 2012 Supplement<sup>1,2</sup>.

<sup>b</sup> See the 2012 Supplement<sup>1,2</sup> for estimates of genotype frequencies among different ethnogeographic groups.

<sup>c</sup> \*X = any HLA-B genotype other than \*57:01.  
HLA-B = human leukocyte antigen B

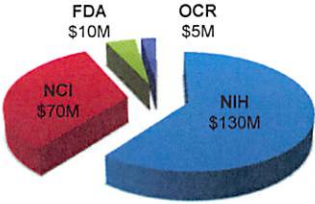

CENTER FOR PHARMACOGENOMICS AND INDIVIDUALIZED THERAPY | UNC-CHAPEL HILL | CPIT.UNC.EDU

**Importance of Pharmacogenomics**

- Precision Medicine Initiative launched during the 2015 State of the Union address  
<http://www.whitehouse.gov/the-press-office/2015/01/30/fact-sheet-president-obama-s-precision-medicine-initiative>

THE PRECISION MEDICINE INITIATIVE

| Agency | Funding |
|--------|---------|
| NIH    | \$130M  |
| NCI    | \$70M   |
| FDA    | \$10M   |
| OCR    | \$5M    |

CENTER FOR PHARMACOGENOMICS AND INDIVIDUALIZED THERAPY | UNC-CHAPEL HILL | CPIT.UNC.EDU

## Importance of Pharmacogenomics

- 878 pharmacogenomics studies and 210 precision medicine studies as of August 2015  
<http://clinicaltrials.gov>
- 380 drugs included in PharmGKB as of August 2015  
<https://www.pharmgkb.org/index.jsp>

CENTER FOR PHARMACOGENOMICS AND INDIVIDUALIZED THERAPY | UNC-CHAPEL HILL | CPIT.UNC.EDU

## Importance of Pharmacogenomics

- FDA Guidance for Industry for Clinical Pharmacogenomics: Premarket Evaluation in Early-Phase Clinical Studies and Recommendations for Labeling (2013)
- Over 100 drugs have FDA-recommended pharmacogenomic information on the drugs' labels  
Table of Pharmacogenomic Biomarkers in Drug Labeling  
<http://www.fda.gov/drugs/scienceresearch/researchareas/pharmacogenetics/ucm083378.htm>

CENTER FOR PHARMACOGENOMICS AND INDIVIDUALIZED THERAPY | UNC-CHAPEL HILL | CPIT.UNC.EDU

## Drug Labeling

**WARNING: RISK OF HYPERSENSITIVITY REACTIONS, LACTIC ACIDOSIS, AND SEVERE HEPATOMEGALY**

Patients who carry the HLA-B\*5701 allele are at high risk for experiencing a hypersensitivity reaction to abacavir. Prior to initiating therapy with abacavir, screening for the HLA-B\*5701 allele is recommended; this approach has been found to decrease the risk of hypersensitivity reaction. Screening is also recommended prior to reinitiation of abacavir in patients of unknown HLA-B\*5701 status who have previously tolerated abacavir. HLA-B\*5701-negative patients may develop a suspected hypersensitivity reaction to abacavir; however, this occurs significantly less frequently than in HLA-B\*5701-positive patients.

Malpractice to not test for HLA-B\*5701 before administering therapy

CENTER FOR PHARMACOGENOMICS AND INDIVIDUALIZED THERAPY | UNC-CHAPEL HILL | CPIT.UNC.EDU

## Limitations in Clinical Practice

- Medical record implementation
- Health system logistics
- Turnaround time
- Cost and insurance coverage
- Privacy and trust
- Clinician education
- Gene-gene interactions
- Clear medical recommendations

CENTER FOR PHARMACOGENOMICS AND INDIVIDUALIZED THERAPY | UNC-CHAPEL HILL | CPIT.UNC.EDU

## Brace Yourselves, Personal Genome Testing is Coming...

CENTER FOR PHARMACOGENOMICS AND INDIVIDUALIZED THERAPY | UNC-CHAPEL HILL | CPIT.UNC.EDU

## Direct to Consumer Advertising (DTCA) of Genetic Testing

- Reduced cost for a panel of genes compared to obtaining multiple single gene tests
- Several vendors available
- Advise caution!

**welcome to you**

**Find out what your DNA says about you and your family.**

- Learn what percent of your DNA is from populations around the world
- Compare your DNA results across countries to answer the question
- Be the first to see how your DNA compares with others

<https://www.Z3andme.com/>

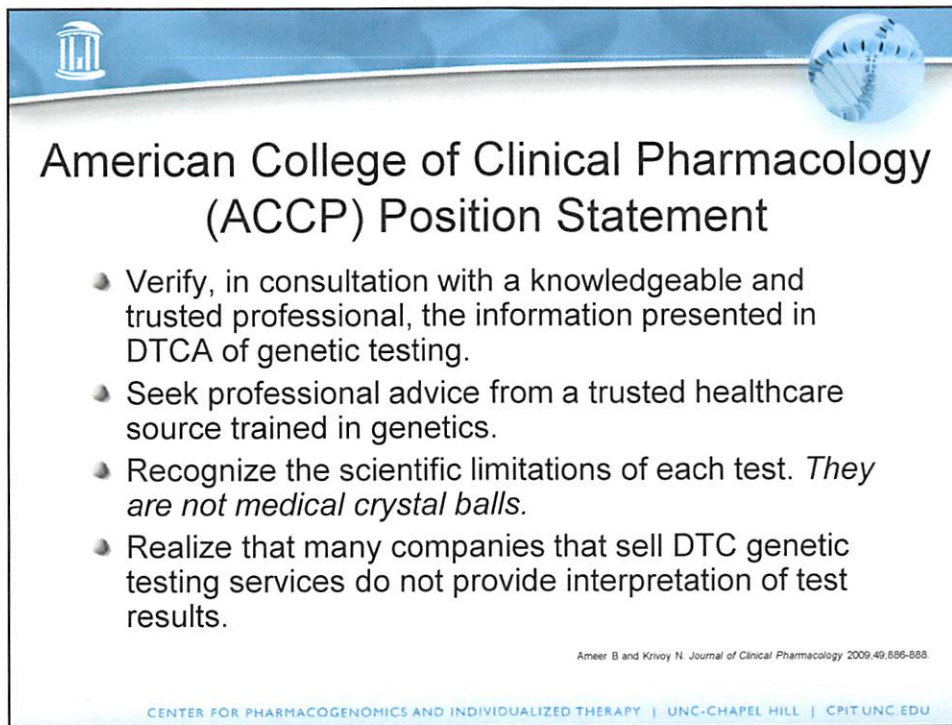

**Finding the right medicine just got easier**

There aren't as many tests for drug metabolism as there are for genetic testing. Because genes affect the way a person's body processes drugs, they can be used to predict how a person's body will respond to certain medications. Genesight is a genetic testing service that provides personalized information to help healthcare providers find the right medicine for each patient's unique genetic makeup. Genesight can help patients avoid side effects and find the right medicine for their condition. Genesight is a genetic testing service that provides personalized information to help healthcare providers find the right medicine for each patient's unique genetic makeup. Genesight can help patients avoid side effects and find the right medicine for their condition.

CENTER FOR PHARMACOGENOMICS AND INDIVIDUALIZED THERAPY | UNC-CHAPEL HILL | CPIT.UNC.EDU

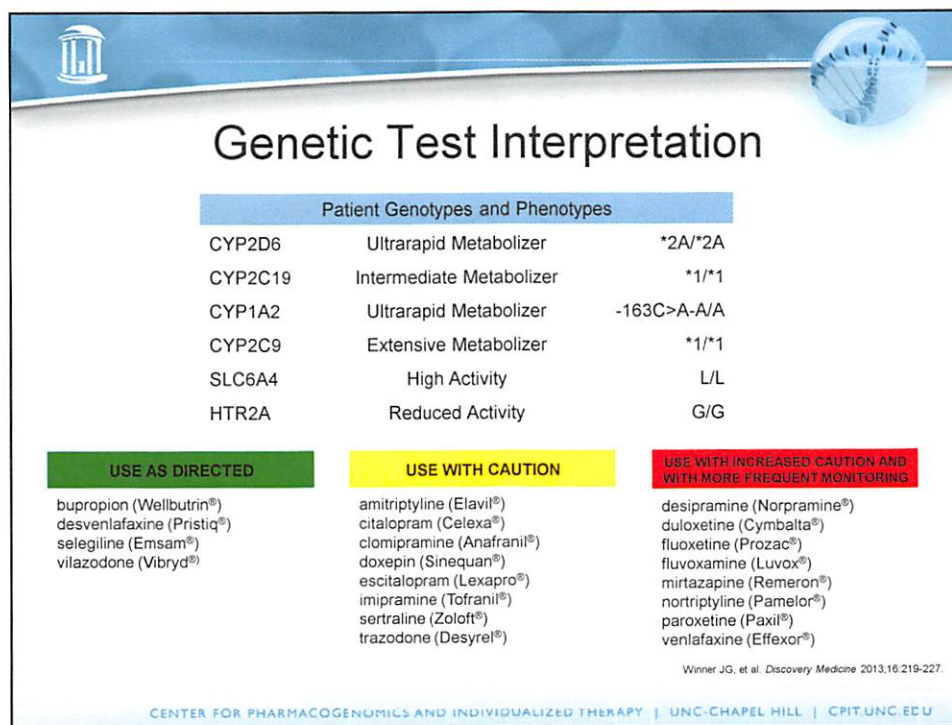

**American College of Clinical Pharmacology (ACCP) Position Statement**

- Verify, in consultation with a knowledgeable and trusted professional, the information presented in DTCA of genetic testing.
- Seek professional advice from a trusted healthcare source trained in genetics.
- Recognize the scientific limitations of each test. *They are not medical crystal balls.*
- Realize that many companies that sell DTC genetic testing services do not provide interpretation of test results.

Ameer B and Krivoy N. Journal of Clinical Pharmacology 2009;49:886-888.

## Pre-emptive Pharmacogenomics at UNC

- No perfect platform for obtaining pharmacogenomics information
- Using multiplex targeted sequencing to determine polymorphisms for actionable genes involved in pharmacotherapy
- High coverage and accuracy when determining polymorphisms
- Relatively inexpensive
- Seeking Clinical Laboratory Improvement Amendments (CLIA) validation

CENTER FOR PHARMACOGENOMICS AND INDIVIDUALIZED THERAPY | UNC-CHAPEL HILL | CPIT.UNC.EDU

## American Society of Health System Pharmacists (ASHP) Statement

- Advocate for the rational and routine use of pharmacogenomic testing.
- Provide test result interpretation and clinical guidance for return of results to providers and patients in collaboration with other health care professionals (e.g., physicians, laboratory professionals, and genetic counselors).
- Optimize medication therapy based on pharmacogenomic test results.
- Support and participate in research, consortia, and networks that guide and accelerate the application of pharmacogenomics to clinical practice.
- Educate and provide information on the clinical application of pharmacogenomics to health professionals, patients, and members of the public.

CENTER FOR PHARMACOGENOMICS AND INDIVIDUALIZED THERAPY | UNC-CHAPEL HILL | CPIT.UNC.EDU

## Accreditation Council for Pharmaceutical Education Standards for 2016

- Pharmacogenomics/genetics  
Genetic basis for disease and individual differences in metabolizing enzymes, transporters, and other biochemicals impacting drug disposition and action that underpin the practice of personalized medicine.
- Pharmacotherapy  
Evidence-based clinical decision making, therapeutic treatment planning, and medication therapy management strategy development for patients with specific diseases and conditions that complicate care and/or put patients at high risk for adverse events. Emphasis on patient safety, clinical efficacy, pharmacogenomic and pharmacoeconomic considerations, and treatment of patients across the lifespan.
